Abstract not available for EP 0806111 (A1)

Abstract of corresponding document: **WO 9607270 (A1)**

A television viewer uses a PIP format for display of program related information (46) such as television program listings from a program schedule data base (22) in the background and moving, real time or stored video clip images of a program selected from the displayed listings in the PIP window (42). All the text of the background information lies outside the PIP window. In one embodiment, as the viewer selects a particular program from the display of current television program listings by means of a cursor (48) or a code number, the corresponding program automatically appears in the PIP window.
